

Facilitating Commoning Component of Commons Platform:

The Philosophy behind the Web Repository

Purpose: a learning system that enables ecosystem actors to understand and facilitate the Commoning of Commons.

USER JOURNEY

Learn the approach – Understand Commoning → Choose a resource system → Follow the process → Access learning resources

1. ORIENT

What is this repository?

[Users understand what the Karyashala Repository is and what it can help them do]

2. UNDERSTAND

What is Commoning?
[The meaning of Commoning of Commons]

3. LEARN

How does capacity building work?
- Understand how capacity building and continuous learning support Commoning and two methods of doing it

4. CHOOSE

Pastureland / Forest / Water
- Select the natural-resource system or theme they are interested in—
Pasturelands, Forests or Water

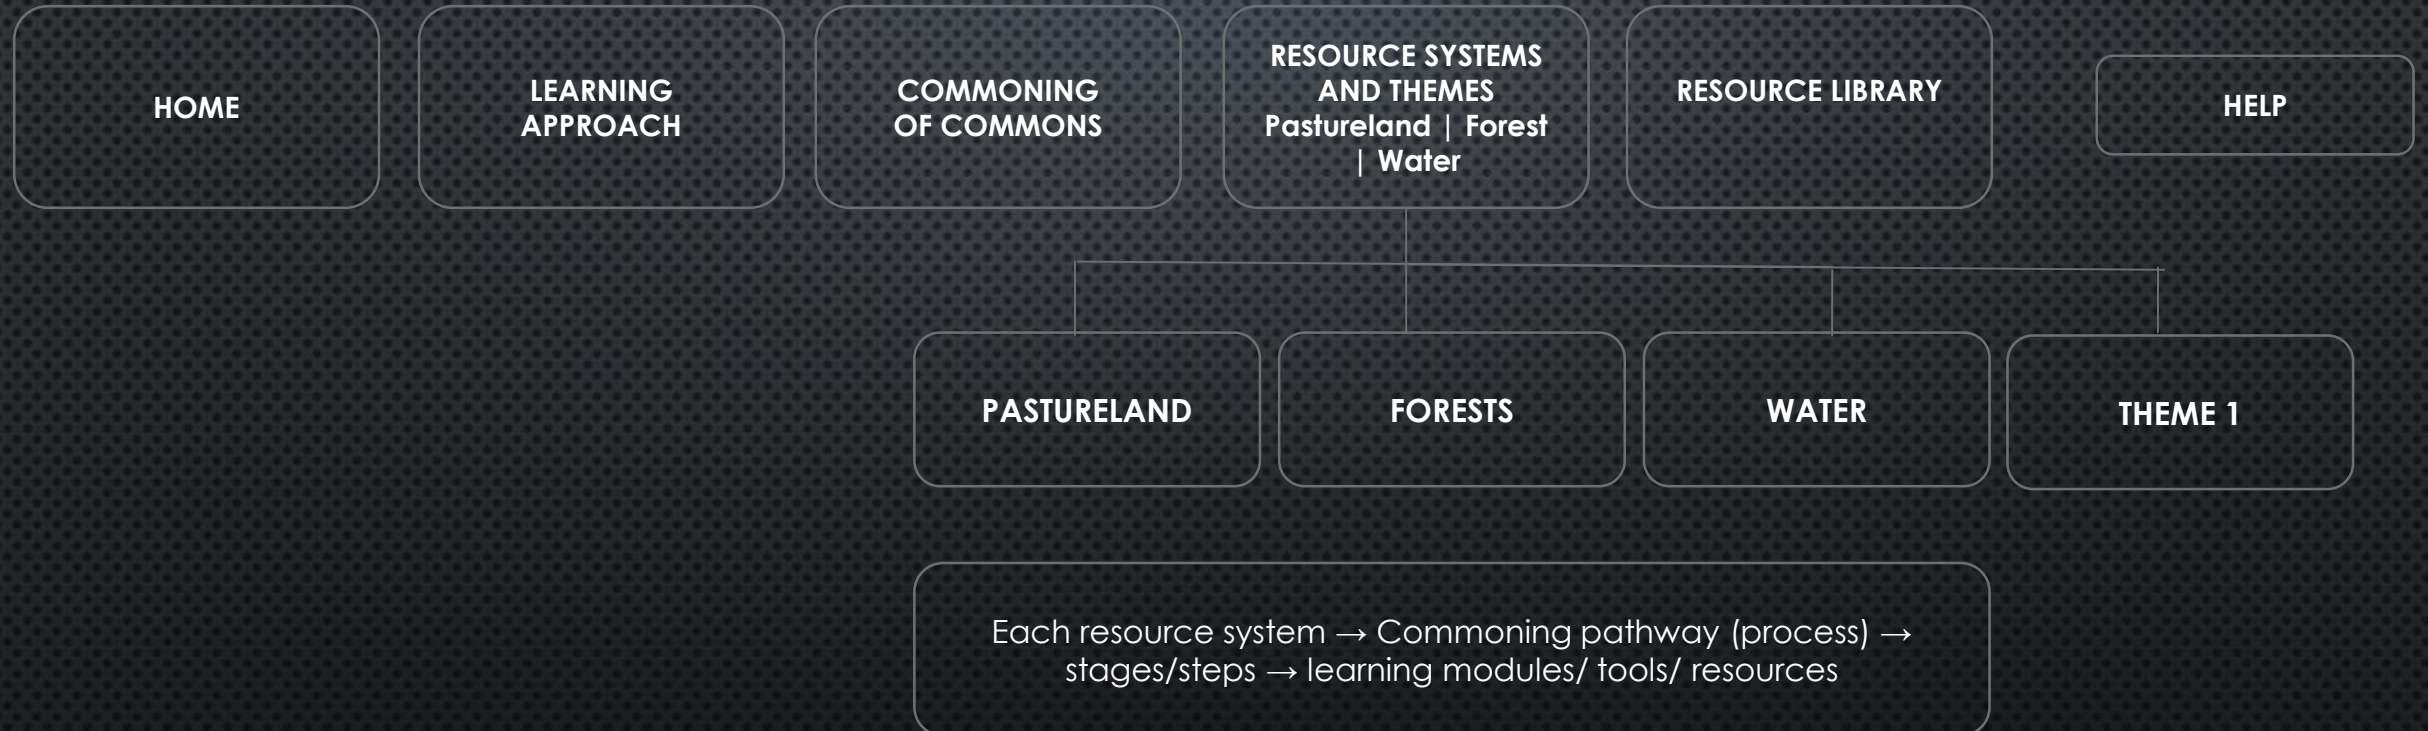

5. ACT

Use resources in sequence
- Based on the need users can access resources in a logical sequence and use them to facilitate processes on the ground

Design principle: The repository will be organized around the learner's task and the Commoning process—not around file types. Each resource-system page should show the process/ pathway first, then the resources needed at each step.

1. Proposed information architecture

Top navigation stays simple; deeper content is reached through guided pathways.

ABOUT THE REPOSITORY

[2–3 lines: Introduce the purpose - Web Repository as a learning system that supports ecosystem actors to build capacities and facilitate the Commoning of Commons. Explain what users can learn and access here.]

COMMONING OF COMMONS

[2–3 lines: Explain that Commoning involves communities collectively securing, governing, restoring and sustainably managing their shared natural resources, with community agency at the center.]

Explore More →

LEARNING FOR COMMONING

[2–3 lines: Explain the learning design—Modular Learning and LDHF—and how continuous learning, field application and guided support help translate training into action.]

Explore More →

EXPLORE BY RESOURCE SYSTEM OR THEME (Marquee)

[Choose the natural-resource system you are working with to understand its Commoning process and access the relevant learning pathway.]

PASTURELANDS

[1–2 lines: What Commoning of pasturelands involves- community institutions, tenure/recognition, collective rules, restoration and sustainable use.]

Explore More →

FORESTS

[1–2 lines: What Commoning of Forest Commons involves - community rights, institutions, collective governance, conservation and sustainable management.]

Explore More →

WATER

[1–2 lines: What Commoning of water resources involves - collective institutions, equitable access, planning, management and stewardship.]

4. Learning Approach — from information to action

[Home](#)[Learning Approach](#)[Commoning of Commons](#)[Resource Systems and Themes](#)[Resource Library](#)[Search](#)

COMMON PURPOSE: build stakeholder capacities + handhold learners as they translate training inputs into action on the ground.

[Commoning is a continuous process that requires ongoing learning, field application, reflection, and handholding, rather than a one-time transfer of information.]

TWO DESIGNS OF LEARNING FOR FACILITATING COMMONING

MODULAR LEARNING DESIGN

- Breaks complex learning into manageable, progressive stages (Commoning process broken into a series of modules)
 - In-person sessions at periodic intervals
 - Field activities between modules
- Each module builds on prior learning and action
- Cumulative field actions contribute to outcomes

[Modular Design Image]

[Link to the Karuashala Operations manual →](#)

LOW DOSE HIGH FREQUENCY (LDHF)

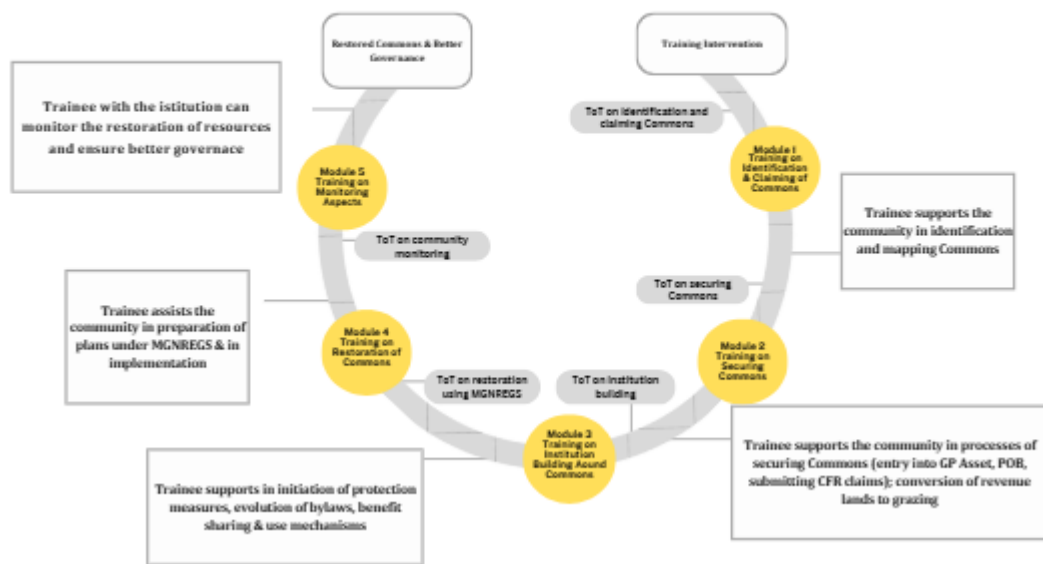

- Short, frequent virtual learning engagements
- Atomized content focused on specific concepts/tasks
 - Guided mentoring between sessions
- Repeated learning–application–feedback cycles
- Enables timely support while action is underway

[LDHF image]

[Link to the Guided Mentoring Handbook →](#)

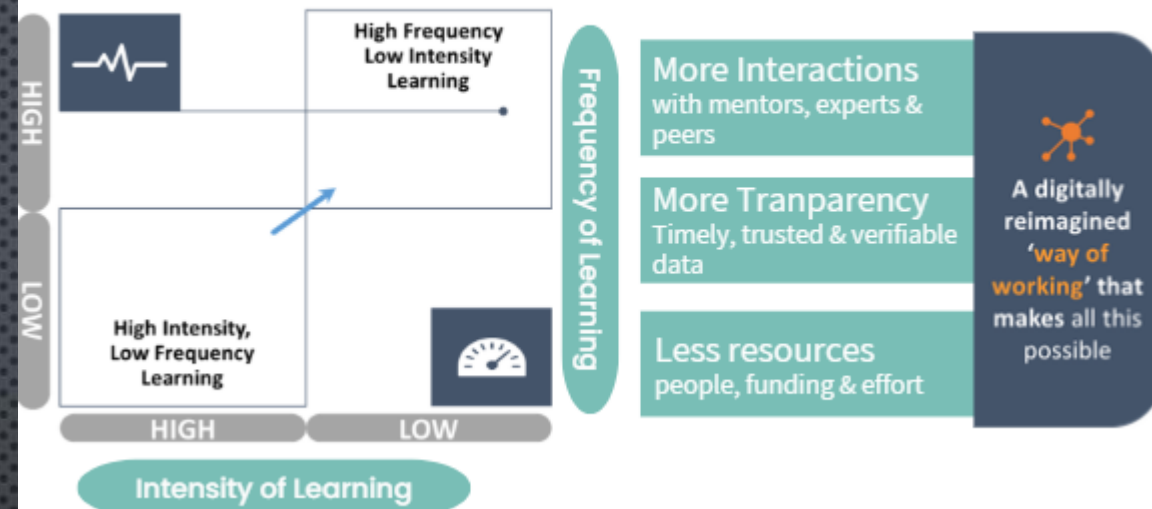

The LDHF design complements the modular approach by enabling continuous learning and reinforcement between formal training interventions.
[Learning Action Cycle Image]

MODULAR TRAINING DESIGN - SECURING, RESTORATION & GOVERNANCE OF COMMONS

**WHAT DOES 'COMMONING OF
COMMONS' MEAN?**
(Section explains what *Commoning of Commons*
means in simple language)

WHY IS COMMONING IMPORTANT OR WHY IT MATTERS
[Communities exercise custodianship and agency over shared natural resources; collective
institutions make decisions and sustain action over time.]

**APPROACH TO COMMONING OF COMMONS
(KEY PILLARS OF COMMONING)**

Refer to
Slide 9

**INSTITUTION BUILDING & GOVERNANCE + TENURIAL SECURITY + RESTORATION & SUSTAINABLE
MANAGEMENT
= ECOLOGICAL HEALTH & RESILIENT LIVELIHOODS**

Note Approach to Commons may be shown through pictures/ images – like a story board or “Commoning in Action” — A visually engaging section with 2–3 short field stories, photographs or examples showing what Commoning looks like on the ground. For example: “How a Gram Sabha strengthened governance of its Forest Commons” or “How communities developed rules for managing pasturelands.” Each could have a Read the Story → link. This would make the fairly conceptual idea of Commoning more tangible.

COMMUNITY AGENCY IS THE COMMON THREAD ACROSS ALL THREE: communities understand rights and responsibilities, deliberate collectively, make informed decisions, act, reflect and adapt.
(To link need and importance of capacity building to build agency, knowledge and capacity)

Approach of Commoning of Commons

The pathway for Commoning of all resource types is broadly the same. Variation in processes based on the type of resource and the legal provision and instruments in place for the resource type

Note: For Commoning of Commons - An interactive "Commoning Journey" strip - where instead of explaining the entire Core Model in text, show a simple visual pathway such as Build collective institutions → Secure tenure → Plan to Restore & manage = Ecological health, social well-being and resilient livelihoods. A user could hover or click each stage for a one-line explanation and then select - Explore the Commoning Process.

Steps to Facilitate the Commoning of Commons

Commoning of Pasturelands

Commoning of pasturelands refers to the collective process through which communities govern, protect, restore, and sustainably manage shared grazing resources. It is founded on the principles of participation, cooperation, shared responsibility, and equitable benefit-sharing. Rather than viewing pasturelands as open-access resources, commoning recognizes them as community assets that require collective stewardship to remain productive and resilient.

The screenshot displays a web interface for 'Commoning of Pastureland'. At the top, a banner image shows a misty landscape with a river and trees, with the 'Pastureland' logo in the top right corner. Below the banner, the page is divided into a left sidebar and a main content area. The sidebar, titled 'Filter Resources', includes dropdowns for 'Select State' (set to 'All States') and 'Themes Category' (set to 'All Themes'), a 'Resource Type' section with checkboxes for 'Training Modules', 'Training Manuals', and 'Atomised Courses', and a 'Select Language' dropdown (set to 'All Languages'). At the bottom of the sidebar are 'Apply Filters' and 'Reset' buttons. The main content area, titled 'Explore Resources under Pastureland', features a 'Sort By' dropdown and a grid of four resource cards. Each card is numbered in a blue circle at the top left: 1. 'Community Forest Resource Rights' (Course, Hindi), 2. 'CFR Claim Process' (Course, Hindi), 3. 'IFR Claim Process' (Module, English), and 4. 'Background and History of FRA' (Video, English). A vertical scrollbar is on the right side of the main content area.

8. Some additional points:

A consistent metadata structure will make the repository easier to navigate and maintain.

RESOURCE CARD For every resource uploaded — REQUIRED FIELDS

- Resource title
- 1-line purpose
- Resource system or Theme
- Commoning stage/process (display only if resource system selected)
- Intended stakeholder/user
- Learning design: Modular / LDHF / Both
- Resource type
- Language
- Version/date
- View / download
- Attribution to Contributor (For non-FES ecosystem actors)

NAVIGATION PRINCIPLES

1. Always show where the user is.
2. Keep the Commoning pathway visible on the resource system page.
3. Recommend the 'next' resource.
4. Use simple/ plain-language labels.
5. Keep search + filters available.
6. Use the same structure across all three resource systems. Similarly, keep the structure common for all the themes

9. Users – Roles and Rights

Public User / Visitor	Anyone accessing the website without registration	Browse the repository; search/filter resources; view resources; download resources; share resource links; access Commoning and learning pathways. Cannot upload or modify content.
Registered User / Contributor	Ecosystem actors, practitioners, CSOs, trainers, institutions or individuals who create an account	All Public User rights + create/manage own profile; upload/submit resources; add resource details/metadata; save draft submissions; edit or withdraw their own submissions before approval; view status of submissions.
Content Reviewer / Curator	FES-designated subject/resource persons responsible for content quality	Review submitted resources; request revisions; recommend approval/rejection; edit/correct metadata; categorize/tag resources by Resource System, Commoning process, stakeholder, language, etc.; ensure resources are placed appropriately within learning pathways.
Repository Administrator	Designated FES repository administrators	Full system rights; approve/reject/publish/unpublish resources; manage users and roles; manage categories/tags; manage homepage/latest resources; edit repository pages; archive/remove resources; manage versions; oversee repository settings and content governance.

Registered users will not be given the right to directly publish resources.

Flow

Registered user uploads → Resource is submitted → FES reviews/curates → Approved → Published on Repository

Work Flow for Contributors Facilitating Commoning

Create Account → Upload Resource → Add Resource Details → Submit for Review → Review/Feedback → Approval → Published

CONSENT Mechanism

--When uploading, a contributor should ideally confirm/ agree to things such as: *I have the right to share this material; I agree to make it available through the repository; I have selected/accepted the applicable open licence; and the resource does not contain information that should not be publicly shared.*

Draft → Submitted → Under Review → Revision Required → Approved/Published → Archived
